

LEGACY KEN BURN REGISTER

Public Statement on Burned Legacy KEN, Mainnet Conversion Eligibility, and Canonical Release Control

TOTAL LEGACY KEN RETIRED

948,972 KEN

Recorded across five public burn / blackhole transactions on Polygon and BSC.

1. Public Confirmation

Kohenoor Technologies confirms that the Legacy KEN burn register has recorded 948,972 Legacy KEN retired across Polygon and BSC through public burn / blackhole addresses.

This public record relates to two retired legacy identifiers: BSC Legacy KEN, identified as KEN(C), and Polygon Legacy KEN, identified as KEN(P). The unified operational asset of the ecosystem is the Ethereum Mainnet KEN, subject to a fixed maximum supply of 101,966 KEN and a canonical annual release cap of 15,000 KEN.

2. Legacy Identifiers and Conversion Parity

Legacy Network	Legacy Identifier	Legacy Burned	Parity to Mainnet KEN	Mainnet KEN Equivalent
BSC	KEN(C)	98,972 KEN(C)	1:1	98,972 KEN
Polygon	KEN(P)	850,000 KEN(P)	500:1	1,700 KEN
Consolidated	Both legacy identifiers	948,972 legacy KEN	As above	100,672 KEN

Based on the verified burn register, 98,972 KEN(C) plus 1,700 KEN(P) equivalent equals 100,672 Mainnet Unified KEN eligible for recognition under the approved parity rules.

3. Mainnet Maximum Supply and Remaining Theoretical Capacity

Supply Item	Amount
Maximum fixed supply of unified Mainnet KEN	101,966 KEN
Mainnet KEN equivalent eligible against verified burns	100,672 KEN
Remaining theoretical capacity inside fixed supply	1,294 KEN

No circumstance permits the unified Mainnet KEN supply to exceed 101,966 KEN. Burn recognition establishes eligibility only within the fixed supply framework and does not create additional supply beyond the Mainnet cap.

4. In Circulation and Canonical Release Rule

CURRENT MAINNET KEN IN CIRCULATION

30,000 KEN

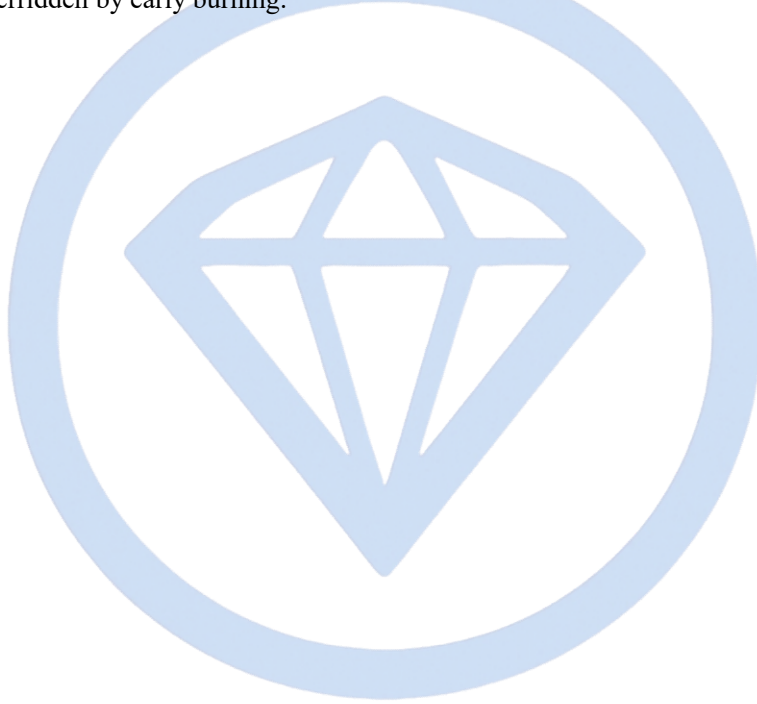

Release cap reached for 2025 and 2026: 15,000 KEN released each year.

The number of Mainnet KEN currently in circulation is 30,000 KEN. This reflects that the annual release cap has already been reached for 2025 and 2026, with 15,000 KEN released in each year.

All Mainnet KEN outside the current 30,000 KEN circulation remains locked until future canonical release windows permit otherwise.

Early burning does not mean early release. Burn recognition establishes conversion eligibility under the parity rules, but actual market circulation remains governed by the canonical annual release framework.

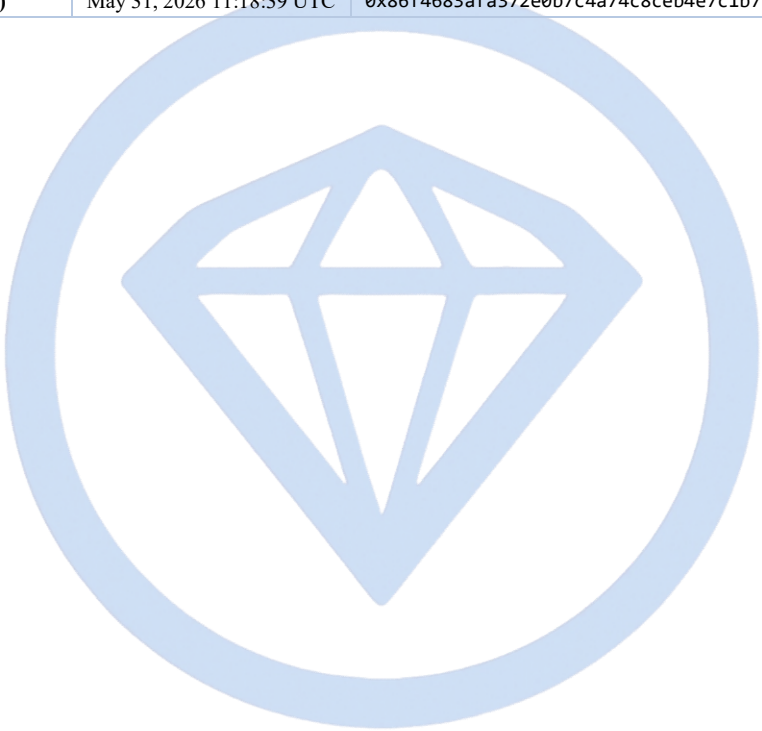

The hard cap of 15,000 KEN per year remains the canonical enforced release rule and cannot be muted, bypassed, accelerated, diluted, or overridden by early burning.

5. Public Transaction Hash Record

The following transaction hashes are incorporated into this statement as the public burn record for the retired legacy identifiers. Dates and amounts are recorded according to the Kohenoor Technologies legacy burn register.

#	Network	Identifier	Amount Burned	Recorded Date / Time	Transaction Hash
1	Polygon	KEN(P)	150,000 KEN(P)	Jan 29, 2026 03:20:44 UTC	0xc05d9853387271b1d8452effe7cf3ff40468a42ce8e6c79cb558f3bbdcfd43bb
2	Polygon	KEN(P)	700,000 KEN(P)	May 31, 2026 11:08:16 UTC	0xb4303c951ceb82e7be187ac43160877761f635d8f5f576899514d4838fbc076
3	BSC	KEN(C)	18,172 KEN(C)	Nov 10, 2025 19:48:47 UTC	0xd83d51ead3b0400db92b47d77ebae6c7794a2a5b5737d31acbbe5a0e0dc0488
4	BSC	KEN(C)	14,000 KEN(C)	Jan 29, 2026 05:05:14 UTC	0x1cf7b2e538b13e8b7644cc0031bef9e09112add17db682447f7ef391fb8aef2
5	BSC	KEN(C)	66,800 KEN(C)	May 31, 2026 11:18:39 UTC	0x86f4683afa372e0b7c4a74c8ceb4e7c1b76a463a1cbb17ff04918975620bece7

6. Public Burn Addresses Used

Burn / Blackhole Address	Usage
0x00000000000000000000000000000000dEaD	Public dead address used for Polygon and BSC legacy burns.
0x0000000000000000000000000000000001	Public blackhole address used for one BSC legacy burn event.

7. Final Public Position

- Legacy supply on Polygon and BSC has been publicly reduced through on-chain burn transactions.
- Burned legacy assets are recognized only within approved parity rules: KEN(C) at 1:1 and KEN(P) at 500:1.
- Unified Mainnet KEN remains subject to a strict fixed maximum supply of 101,966 KEN.
- Only 30,000 KEN is currently in circulation because the 2025 and 2026 release caps have already been reached.
- The annual release cap of 15,000 KEN remains binding and fully enforced.
- Early burning does not mean early release; unreleased eligible Mainnet KEN remains locked until future release windows.
- The unified Mainnet KEN is the future operational asset of the Kohenoor ecosystem, governed by transparency, supply discipline, and canonical release control.

8. Compliance and Interpretation Note

This document is a public record and operational clarification for legacy burn consolidation. It does not constitute financial advice, investment advice, a promise of future value, or a guarantee of liquidity, exchange listing, return, or market performance.

All burn equivalence, release eligibility, and circulation status remain subject to the canonical Kohenoor Technologies Mainnet KEN supply framework and any applicable legal, compliance, and operational controls.

TOTAL LEGACY KEN RETIRED
