

KEN-HyFi Ecosystem Update — Alpha Testing Completed, Apps Package Released with Pitch Deck

This update is released as part of the ongoing public documentation of the **KEN-HyFi 360° Hybrid Finance & Commerce Ecosystem**, developed by **Kohenoor Technologies (USA / UAE)** in collaboration with **ProEdge Saudi Arabia** and **Knowledge Gateway Pakistan**.

Following the previously published architecture notes, whitepaper, and public disclosure materials, we are releasing a new update announcing the **completion of the Alpha testing stage** for the core ecosystem applications, along with the release of the **apps package overview and investor pitch deck**, after more than **three years of internal research, development, and controlled local-scale implementation**.

This repository is being continuously updated to maintain a transparent development history and to provide public access to technical, architectural, and operational progress of the project.

Alpha Phase Milestone — March 23, 2026

As of **March 23, 2026**, all primary applications of the KEN-HyFi ecosystem are fully functional under a unified hub and have entered the **public Alpha testing phase**, where evaluation is being carried out by internal developers, institutional partners, and public users for UI/UX, performance, and feature validation.

The ecosystem currently includes the following core components:

1. **KEN-HyFi Core System** — Hybrid settlement and operating layer
2. **KENFI Advisor** — AI-powered fintech advisory and portfolio intelligence
3. **KAI** — AI-driven business intelligence and automation engine
4. **KENCOM** — Hybrid commerce and marketplace platform
5. **ProEdge (Education 3.0 Platform)** — training, certification, and human resource development
6. **KEN Miner / Reward System** — ecosystem engagement and utility layer
7. **Investor Portal** — digital disclosure and pitch interface for the ecosystem

These applications are currently accessible in Alpha environment for testing and evaluation.

Development Background

The KEN-HyFi ecosystem has been developed through a phased approach, beginning with local and institutional implementation through:

- Knowledge Gateway Pakistan
- ProEdge Saudi Arabia
- Kohenoor Technologies USA / UAE

These environments enabled early-stage validation of the system under real operational conditions, including **Education 3.0 training environments, fintech advisory services, hybrid payment experiments, and AI-assisted business intelligence tools.**

The completion of internal testing has allowed the project to move into **public Alpha testing with full ecosystem integration.**

Investor Disclosure and Pitch Deck Release

Along with the Alpha milestone, the updated **ecosystem pitch deck and investor disclosure portal** are being made available for early-stage observers, collaborators, and potential partners interested in the project during the **advanced Alpha / pre-Beta phase.**

Next Phases

Following Alpha testing, the roadmap continues with:

- Beta Testing Phase
- Market Launch Phase
- Growth & Scaling Phase
- Institutional and enterprise integration
- Expansion of AI-driven hybrid finance and commerce services

Future Zenodo updates will include technical revisions, Beta release notes, and deployment reports as the ecosystem progresses toward global rollout.

Purpose of This Repository

This Zenodo record is maintained to ensure:

- Transparent public disclosure
- Versioned technical documentation
- Research-level archiving
- Institutional credibility
- Long-term traceability of development

All major milestones of the KEN-HyFi ecosystem will continue to be documented here.
