

ProEdge Flagship Lesson Plan (Education 3.0+)

(Sample for better understanding of conventional educationists)

Unit 1: AI in Business Intelligence

Duration: 90 Minutes

Lesson Objective

By the end of this session, learners will understand how AI transforms decision-making, apply AI-BI thinking to real business scenarios, develop structured analytical questioning, and align decision-making with ethical intelligence.

Education 3.0+ Learning Framework

Reflect → Learn → Apply → Evaluate → Correct → Contribute

Phase 1: Alignment and Activation (10 minutes)

Learners reflect on recent decision-making experiences and identify whether their choices were data-driven or instinct-driven. This phase prepares cognitive and emotional readiness for structured learning.

Phase 2: Concept Immersion (15 minutes)

Introduction to AI in Business Intelligence, including evolution from traditional BI systems to AI-driven analytics. Use visual demonstrations and dashboards to enhance understanding.

Phase 3: Mechanism Understanding (15 minutes)

Explore how AI systems operate, including natural language processing, automated insights, and predictive modeling. Learners interact with simplified datasets to identify patterns.

Phase 4: Real-World Application (15 minutes)

Case-based discussion on industries such as retail, finance, and healthcare. Learners analyze where AI outperforms human analysis and where human judgment remains essential.

Phase 5: Scenario Execution (20 minutes)

Learners engage in a structured scenario where they must advise on marketing investment decisions. Tasks include selecting analytical methods, forming questions, and presenting insights.

Phase 6: Reflection and Correction (10 minutes)

Learners evaluate their own decision-making processes, identify assumptions, and refine their approach.

Phase 7: Reinforcement (5 minutes)

Quick recap of key principles including analytical levels, AI-human interaction, and decision frameworks.

Phase 8: Mentor Intervention

Mentor guides learners by challenging assumptions, refining analytical thinking, and ensuring conceptual clarity.

Learning Resources

Audio-Visual: Dashboard demonstrations, AI visualization examples.

Technical Tools: Power BI, Tableau datasets.

Exercise Kits: Scenario worksheets, reflection sheets.

AI Support: KAI-based prompts and analytical assistance.

Evaluation Framework

Conceptual understanding assessed through quizzes.

Analytical ability evaluated through scenario execution.

Decision quality reviewed by mentor.

Ethical alignment assessed through reflection

This lesson plan represents a structured implementation of Education 3.0+, integrating knowledge, application, reflection, and ethical intelligence. It prepares learners not only to understand AI in Business Intelligence, but to think, decide, and act effectively in real-world environments.

The same is developed by KAI to explain delivery framework at Knowledge Gateway and ProEdge in an easy-to-understand way.
