

KOHENOOR KEN (KEN)

Whitepaper v2.0 (Final)

Enhanced Supply Mechanics & Legacy Consolidation

Purpose

This document consolidates the KEN supply architecture, legacy token framework, treasury transparency principles, and release governance mechanisms for legal review, exchange due diligence, auditor verification, and public disclosure.

Canonical Token

Ethereum Mainnet KEN is the sole canonical ecosystem utility token. Contract Address: 0x5f602133653237f362eb69826ba8237f4f7ab0c3.

Legacy Contract Registry

KEN (C) – BNB Smart Chain – 0x7e0c21bfc08a4abf17cd52a2424a8f8eeeeec8431 – Retired Legacy Contract.

KEN (P) – Polygon – 0x0835cdd017ea7bc4cc187c6e0f8ea2dbe0fea0dd – Retired Legacy Contract.

Legacy contracts remain publicly disclosed for transparency, auditability, burn verification, and supply reconciliation.

Maximum Supply

Maximum theoretical supply is fixed at 101,966 KEN. No inflationary minting exists after genesis deployment. No rebasing. No proxy mint logic.

Supply Composition

100,000 KEN derives from the KEN (C) consolidation framework.

Up to 1,966 KEN derives from the KEN (P) consolidation framework.

Total theoretical maximum supply: 101,966 KEN.

Burn-to-Unlock Framework

KEN (C): up to 1:1 unlock eligibility subject to annual release controls.

KEN (P): up to 1,966 aggregate Mainnet KEN unlock eligibility subject to governance and operational controls.

Burn events do not automatically create issuance rights.

Annual Release Controls

Maximum annual issuance ceiling: 15,000 KEN per calendar year.

Release remains subject to treasury review, governance oversight, compliance assessment, operational readiness, and burn-equivalent eligibility.

Treasury Architecture

Scheduled Release Vault (Timelock Safe):

0xA9582801CA80117A427A41A99671a6A2481A1aBc

Emission Treasury:

0x47865542D29d3a93FEC6a55F145c89E6846Bf1A0

Ecosystem Treasury:

0xE8Fa4b57BE78bd3e783c67852e38293BfA9bf396

Flow:

Scheduled Release Vault → Emission Treasury → Ecosystem Treasury → Ecosystem Distribution.

Structural Characteristics

- Fixed Maximum Supply
- No Inflationary Minting
- No Rebasing
- Burn-Dependent Unlocks
- Annual Release Caps
- Publicly Verifiable On-Chain Activity
- Treasury Transparency
- Governance Oversight

Important Clarification

KEN is a utility token and does not represent equity, ownership, dividends, partnership interests, debt obligations, or guaranteed returns.

Scarcity mechanics, supply controls, release schedules, and burn frameworks should not be interpreted as guarantees of value appreciation, liquidity, profitability, or future performance.

Issuer Statement

Issued by Kohenoor Technologies. This document is intended for transparency, legal review, auditor examination, exchange due diligence, and public disclosure purposes.
